

# SECURITY

FOR MICROSOFT  
SHAREPOINT SERVER

Protect sensitive data in Microsoft SharePoint  
with multilayered technology

CYBERSECURITY  
EXPERTS ON YOUR SIDE

A SharePoint security product is designed to protect the central collaboration servers of an organisation from threats. A single user uploading a malicious file to SharePoint can instantly cause a cascade effect that renders your organisation's files inaccessible.

# The ESET difference

## MULTILAYERED PROTECTION

ESET combines multilayered technology, machine learning and human expertise to provide our customers with the best level of protection possible. Our technology is constantly adjusting and changing to provide the best balance of detection, false positives and performance.

## DATABASE DIRECT ACCESS

An optional method to pull files, where ESET SharePoint Security bypasses the SharePoint object model and pulls the file directly from the dedicated database server, to provide even better performance.

## UNPARALLELED PERFORMANCE

A major concern for many organisations is the performance impact of their endpoint protection solution. ESET products continue to excel in the performance arena and win third-party tests that prove how lightweight our endpoints are on systems.

## WORLDWIDE PRESENCE

ESET has offices in 22 countries worldwide, R&D labs in 13 and a presence in over 200 countries and territories. This helps to provide us with the data to stop malware prior to it spreading across the globe, as well as to prioritise new technologies based on the most recent threats or possible new vectors.

*"When we found ESET, we knew it was the right choice: reliable technology, robust detection, local presence and excellent technical support, everything that we needed."*

— Ernesto Bonhoure, IT Infrastructure Manager;  
Hospital Alemán, Argentina; 1,500+ seats

# The technology

Our products and technologies stand on three pillars

## ESET LIVEGRID®

Whenever a zero-day threat such as ransomware is seen, the file is sent to our cloud-based malware protection system – LiveGrid®, where the threat is detonated and behaviour is monitored. Within minutes, results of this system are provided to all endpoints globally without requiring any updates.

## MACHINE LEARNING

Using the combined power of neural networks and handpicked algorithms, incoming samples are correctly labelled as clean, potentially unwanted or malicious.

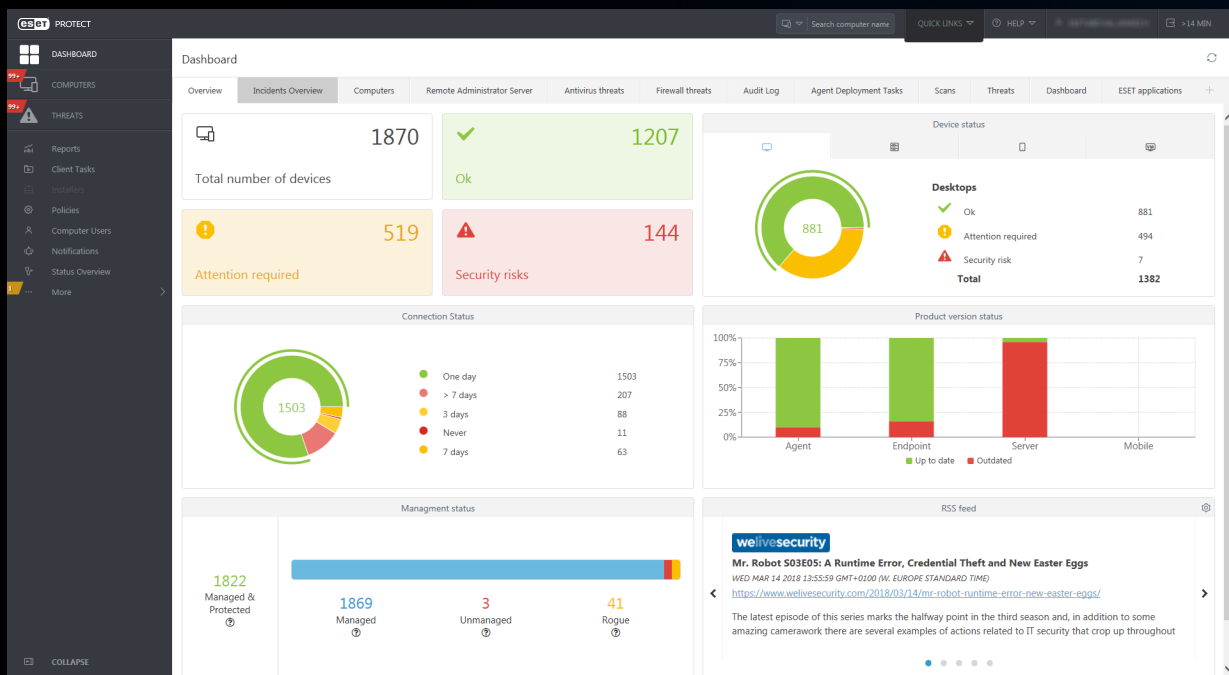

## HUMAN EXPERTISE

ESET's world-class security researchers share elite know-how and insight, to ensure our users benefit from optimum, round-the-clock threat intelligence.

A single layer of defence is not enough for the constantly evolving threat landscape. All ESET security products have the ability to detect malware pre-execution, during execution and post-execution. Focussing on more than one specific part of the malware lifecycle allows us to provide the highest level of protection possible.

## ESET PROTECT

All ESET endpoint solutions are managed from a single-pane-of-glass cloud console, ESET PROTECT, ensuring the complete overview of your network.
